

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Appl. No. : 10/790,093
Applicant : Robert S. WINSOR
Filed : March 2, 2004
TC/A.U. : 2633
Examiner : Quan-Zhen Wang
Confirmation No. : 1178
Docket No. : 0918.0269C
Customer No. : 27896
Title : Method and Apparatus for Free Space Optical
Communication Using Incoherent Light

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

DECLARATION UNDER 37 CFR 1.132 OF WILLIAM RABINOVICH

Sir:

I, William Rabinovich, state as follows:

1. I am currently head of the Photonic Materials and devices section of the US Naval Research Laboratory.
2. I have a B.S. Physics degree from the State University of New York, Stony Brook, and M.S. and Ph.D. degrees in Physics from Brown University.
3. Attached as Exhibit A is my resume.
4. I have been involved in research in the areas of optical communications including free space optical communication (FSOC) for eight years and have published numerous papers in this area.
5. I am making the statements herein not as a representative of the U.S. Government or any of its agencies, but only as researcher with knowledge and experience in the field of free space optical communications.
6. Mr. Robert Winsor has described to me the concept of reducing atmospheric scintillation associated with free-space optical

communication (FSOC) by using a beam of phase incoherent light from a single incoherent light source, such as a superluminescent LED (SLED).

7. I am very familiar with SLED devices and their capabilities, and I work in the field of FSOC.
8. Prior to my discussions with Mr. Winsor concerning his idea related to atmospheric scintillation reducing techniques outlined in item 6 above, it did not occur to me that a device, such as a SLED, which produces phase incoherent light, would reduce atmospheric scintillation associated with FSOC. There are many possible factors that contribute to scintillation and only some of them might occur due to temporal coherence. A detailed understanding of what causes scintillation is still an area of active research. As a result, the effects of reducing temporal coherence have, to my knowledge, not been predicted.
9. I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

William Rabinovich

Signature: 

Date: 7/25/06

EXHIBIT A
Curriculum Vitae

William S. Rabinovich

- Education**
- Ph.D. - Brown University
Physics, May 1987
Thesis Advisor: Professor Nabil Lawandy
Dissertation: "Distributed Feedback Effects in Lasers and High Gain Laser Instabilities in Optically Pumped CH_3F "
 - M.S. - Brown University
Physics, 1984
 - B. S. - State University of New York at Stony Brook
Physics (with high honors), 1982

Honors

- NRL Technology Transfer Award 2004
- Federal government outstanding performance award, 1998
- Federal government outstanding performance award, 1994
- Sigma Xi research award, 1987
- Phi Beta Kappa, 1982
- Sigma Pi Sigma, 1982

Appointments

- Optical science division representative to the NRL patent review board (1994- 1996)

Fellowships

- National Research Council Postdoctoral Fellowship
at the Naval Research Laboratory, 1987-1989
- NASA Graduate Student Research Fellow, 1985-1987
- Air Force Graduate Student Summer Support Program

Professional Experience

Head, Photonic Materials and Devices Section, Optical Science Division, US Naval Research Laboratory, Washington, DC (2000-date)

Research Physicist, US Naval Research Laboratory, Optical Science Division, (1989-2000),
Research in multiple quantum well spatial light modulators, photorefractive materials, optical pattern recognition, optical phase conjugation, mid-infrared nonlinear optics of quantum well intersubband transitions and free space optical communications.

Contractor, University of South Florida (1989), contractor in the Laser Physics Branch at the Naval Research Laboratory. Research in solid state lasers and achromatic phase conjugation.

Postdoctoral Research Associate, Naval Research Laboratory (1987-1989). Research in distributed feedback lasers, solid state lasers and stimulated Brillouin scattering.

Research Assistant, Brown University (1983-1987) Laboratory of Professor Nabil Lawandy, Division of Engineering and Department of Physics, research in optical bistability, laser instabilities and distributed feedback lasers.

Teaching Assistant, Brown University (1982-1984)
Department of Physics. Ran physics department computer resource center and taught astronomy laboratory and undergraduate electricity and magnetism help session.

Undergraduate Research Assistant, SUNY Stony Brook (1980-1982), in the lab of Professor Harold Metcalf, research in atomic and molecular physics.

Research Interests

- Free space optical communications
- Micromachining and micro-electromechanical systems
- Nonlinear optics
- Photorefractive materials
- Optical processing and phase conjugation
- Multiple quantum well spatial light modulators
- Mid-infrared nonlinear optics of intersubband transitions
